of women
are impacted by hair
loss, affecting their
self-esteem and
quality of life.*

85%

of men
are impacted by hair
loss, affecting their
self-esteem and
quality of life.*

Take ownership and proactively address hair loss with an innovative treatment with clinically proven results.

WHAT IS FoLix?

FoLix uses laser technology to harness the body's natural processes. The laser's interaction with the tissue promotes enhanced blood circulation, growth factors, and **stimulates hair follicles.****

- ✓ No chemicals
- ✓ No anesthesia
- ✓ Minimum discomfort
- ✓ No needles
- ✓ No downtime

ABOUT THE TREATMENT

What should I expect?

FoLix is a fast 30-minute treatment requiring 4-6 sessions at 4-week intervals. During the treatment, you may experience minimal discomfort or a warm prickling sensation as the laser is applied to the scalp. To ensure your utmost comfort, contact cooling is applied.

When will I see results?

Since the hair growth cycle is long, it might take time to see results. However, throughout the treatment series, reduced hair shedding and the growth of baby hairs should be noticeable.

FDA-Cleared
effective and safe.

Fast, 30-minute
treatments

4-6 monthly

PROVEN NATURAL RESULTS

Contraindication and Risks

The use of FoLix is not suitable for everyone, contraindicated for certain patients and carries some risks. FoLix treatment is not suitable for patients with any concurrent cancer or history of skin cancer, or pre-cancerous lesions at the treatment area, active infection, chronic fungal or bacterial diseases or chronic dermatological condition of the scalp. Treatment may cause redness, swelling, scarring, damage to natural skin texture (e.g. blisters), fragile skin, burns, hair shedding, itching, and pigmentation change. Be sure to consult with us before choosing this treatment.
